VS Code, Android Studio, Anaconda, Dev C, Google Collab

CERTIFICATES

- Data Analytics Using Excel
Great Learning
- SQL Fundamentals
Solo Learn

PROJECTS

Event Wave

Event Management System

- Developed a full-stack web application to manage events, including user registration, event listings, and booking functionalities.
- Designed **front-end interfaces** using HTML, CSS, and JavaScript for seamless user experience.
- Built **backend logic** in PHP to handle form submissions, event data, and user interactions.

AZAM

e Commerce Application

- Designed and developed a console-based e-commerce platform using **Object-Oriented Programming** principles.
- Handled both customers and providers with separate modules for product listing, order placement, and inventory management.
- Implemented **file handling** for persistent storage of user data, product details, and transactions without a database.

Quizify

Quiz Application

- Built an interactive Android quiz app using **Java and XML** for front-end UI and layout design.
- Integrated **Firestore** for real-time database storage, user authentication, and quiz data management.
- Implemented features like multiple-choice questions, score tracking, and user login.
